The i-th patient's time series (total length: $L_i = 4$)
Time between time steps 1 & 2
Time between time steps 2 & 3
Time between time steps 3 & 4
$\Delta_i^{(1)}$
$\Delta_i^{(2)}$
$\Delta_i^{(3)}$
Time step 1
$\mathbf{x}_i^{(1)}$
Time step 2
$\mathbf{x}_i^{(2)}$
Time step 3
$\mathbf{x}_i^{(3)}$
Time step 4
$\mathbf{x}_i^{(4)}$
Use temporal network h to predict the next time step's embedding vector using all previous embedding vectors and time differences
h
$\widehat{\mathbf{z}}_i^{(4)}$
$\mathbf{z}_i^{(1)}$
$\mathbf{z}_i^{(2)}$
$\mathbf{z}_i^{(3)}$
$\mathbf{z}_i^{(4)}$
Embedding space
